Python Programming - Working with Lists and Files - Revised

This course will teach you how to create lists in your programming, the process of updating your list, and how to search through it. You will learn to use 'remove()' when you know the value you want to be removed and 'del' when you know the index number of the item you want removed. The course will teach you how to create a file with your code, write information in a file, and specify the file name including the file extension and the access mode. Next, how to read from a file.

Modules Studied

Module 1: Remembering Lists

Module 2: How to Save Information in Files

Module 3: Reading from Files

Module 4: Course assessment
